

AZURE URBAN RESORT RESIDENCES, PHILIPPINES

Filtration and sanitisation systems installed by Chemsphere Corporation
Luxury residential and resort lagoons and pools.

The 3,500-square meter man-made beach, lagoon and associated water facilities are one of many unique features at the spectacular new Azure Urban Resort Residences near Manila.

With over 30 years experience in the Pool and Spa industry, Chemsphere Corporation of Quezon City, Philippines was selected to install the filtration and sanitation systems responsible for keeping the water at Azure sparklingly clean and healthy.

AutoChlor™ - The Natural Choice.

Rogelio Heredero, the owner of Chemsphere Corporation, considered AutoChlor™ technology to be a natural choice for the project.

“This is a very large, premium quality aquatic facility. It needed an effective, reliable and easy to operate water hygiene system. Australian Innovative Systems is an established Australia-owned leader in water disinfection. Their AutoChlor™ inline chlorinators do away with the expense and inconvenience of storing liquid chlorine onsite in big tanks. Offline dosing can be a real hassle. Inline chlorination with AutoChlor™ is simpler and just what this project needed,” he said.

Teamwork and collaboration.

Chemsphere Corporation also enjoys working with a partner that thinks globally and is experienced in working with customers all around the world.

“We spend a lot of time overseas to stay abreast of the latest trends and innovations in the Pool and Spa industry, for example we participate in the Splash! Pool and Spa Trade Show in Australia. AIS is at these events too, but more importantly they roll their sleeves up and provide real on-the-ground support where it matters most - with us, on site, on our clients’ premises. For example they were able to provide on-the-ground support and advice during the installation of AutoChlor™ at Azure. That’s the kind of partnership I value with my suppliers,” said Rogelio.

Extending the partnership.

Chemsphere Corporation provides Pool and Spa design, construction and support services across the residential, resort and competitive swimming pool sectors. “We’ve used different AIS products in other facilities too and I have every confidence that we will continue to install AIS technology in more pools in the future.”

AutoChlor™

MAIN WATER BODY

Model:	SRC-3000	
Water Volume:	2.5	Million Litres
TDS Level:	5000	Parts Per Million
Free Cl₂ Residual Requirement	2 – 3	Milligrams / Litre
Chlorine Production Per Unit:	3000@5000	Grams / Hour @ Parts Per Million
Year Commissioned:	2013
