

Narellan Pools and AIS: New Partnership

Narellan Pools has announced a new partnership with one Australian manufacturer of salt and mineral water chlorinators, **Australian Innovative Systems (AIS)**. *Chris Meyer*, Managing Director of Narellan Pools said that his company had recently (July 2013) decided to consolidate its supply chain to include only two Australian companies, AIS for chlorination systems and Waterco for pumps, filters and accessories. "After enjoying over 40 years in the pool industry and over 10 years in the franchise industry, the Narellan Pool brand is synonymous with quality, service and trust, Meyer said. "It was important for us to choose supply partners with a proven track record and with equally respected reputations. "I searched all over the world for a salt and mineral water chlorinator manufacturer good enough to be associated with our brand but found it right here in Australia. The decision to go with AIS was really quite simple; it was based on giving our clients the best available products on the market," Meyer said. CEO of AIS, *Elena Gosse* said that like Narellan, her company was only interested in working with "the best of the best." "Like Narellan, AIS has been in business for almost 40 years and is nationally and internationally regarded for our

quality products and innovation. We started talking with Chris and his team a few months ago about our ability to satisfy all of Narellan's water disinfection needs," Gosse said. "The deal was done based on our mutual respect for each other's' companies, the strength of AIS's reputation, our willingness to work in partnership with Narellan and its customers and of course the quality of our products." ■

Huwa-San WT: A Safe Biofilm Remover

A biofilm is a symbiotic community of microorganisms attached to a solid wet surface. A Biofilm can contain many different types of microorganism, e.g. bacteria, archaea, protozoa, fungi and algae; each group performing specialized metabolic functions. However, some organisms will form monospecies films under

certain conditions. Usually, bathers using warm spas and pools, who neglect to shower before entering the water, contribute body oils, suntan lotion, make-up, hair products, and perspiration to the pool water. These materials are all nutrients that will accelerate the growth of the Biofilm. Biofilms have been associated with tuberculosis, prostatitis and the chronic ear infections that plague many young children. They are especially prevalent on catheters, artificial heart valves, contact lenses and other implanted medical devices. It is estimated that biofilms account for the majority of chronic bacterial infections. Aware of all these hazards to humans and the environment, **Roam Chemie** from Belgium introduced its new water treatment environment friendly disinfectant called Huwa-San WT to effectively remove any type of biofilm. Huwa-San WT is Chlorine free and does not cause any red eyes or skin as a result of irritations, in combination with a high and stable effectiveness under different high temperatures and pH levels. It is a colorless, odorless, and tasteless powerful solution against algae, bacteria, and viruses, all at the same time. It is a perfectly safe powerful solution that dissolves only to non-toxic natural elements and they are oxygen and water; easy to control, measure, and use. ■
