Australian Innovative Systems' major presence at 2015 Asia Pacific Summit & Mayor's Forum

Leading water disinfection company and chlorinator manufacturer, Australian Innovative Systems (AISystems) showcased its award-winning, innovative technology to over 1,000 delegates at the recent Asia Pacific Cities Summit and Mayor's Forum at the Brisbane Convention and Exhibition Centre.

AIS Chief Executive Elena Gosse (pictured) was a guest speaker at the Forum while AISystems also displayed its industry leading technology in the Forum's 'Market Square' Expo.

Gosse spoke on the topic 'Turning the tide in water disinfection', sharing her experience of how innovative water disinfection technologies can contribute to building safer and more inclusive cities.

Commenting on her presentation, Gosse explained "water is our most precious resource (and) as our world becomes more populated, the growing demand for our cities' leisure and recreational facilities, such as public pools, lagoons, aquatic centres, water parks and water features in the built environment will require advanced water disinfection solutions.

"We have access to that advanced technology right now and it is vital that we embrace it in order to ensure our cities remain clean and healthy for all in the face of rapid growth and urbanisation."

AIS' innovative technology is capable of producing chlorine within the water itself and from minerals and salts already present in the water. Gosse stated "water disinfection technology such as AIS' is more flexible and can be used in greater applications than ever before."

Wangaratta Race Course introduces new Toro Irrigation system

The Wangaratta Turf Club has recently undergone a major renovation of the race track and its irrigation system, as well as having completed upgrades to both its sand and grass training tracks.

Reconstruction of the main course started late 2014 with its old surface being sprayed and mowed down, and the top 40mm of the surface being removed (including 90% of the seed bed).

The surface was then laser levelled and over 3,000 metres³ of sand added to the profile of the track to improve drainage and growing conditions.

Toro® T5 sprinklers with low angle nozzles were installed along the narrow training track with a spacing of eight meters.

The market-leading Toro® Lynx® Central Control system was chosen to control the irrigation system.

For details contact 08 8300 3633, E: info.au@toro.com, www.toro.com.au

Seoul Hilton offers wettest show on earth

The Hilton Hotel in South Korea's capital, Seoul has installed the latest version of the Empex Watertoy's Aquacircus.

The new version is a downsized layout for installation in hotels and resorts, recreation centres, and areas where space is a premium.

The Hilton Hotel Seoul water playground features an Aquacircus Aquadek with interactive circus theming as well as a tipping bucket which periodically tips a big surprise splash. Created with the signature bright Empex colours the new playground has added a new dimension of child play to the hotel facilities.

Empex offers a lifetime corrosion warranty as well as low electrical and heat conductivity providing the ultimate in safe water play for children.

In Australia, Empex Watertoys are distributed by Swimplex Aquatics.
