

Don't be rash with the sun

The coolest rashies in the country come from Acqua Brand, as their rash shirts attract plenty of looks while deflecting UV rays.

Each shirt is 100 per cent Australian designed, manufactured and crafted using Italian XtraLife Lycra fabrics with a contoured fit, helping to smooth and flatter every figure and making them suitable for women of all ages. The fabrics are UPF 50+, lightweight, breathable and two times more resistant to chlorine, suntan creams and oils than most other fabrics.

This eye catching striped rash shirt is just one example of the style developed by founders Julie Capobianco and Jane Hayes.

Latest in semi-commercial disinfection

Australian Innovative Systems' (AIS) commitment to continuous innovation sees two new products launched in May 2015 – to be showcased at the Piscine SPLASH! Asia Trade Show in Singapore (20-21 May 2015).

The new Midi Series is a range of automatic, inline, salt or mineral water chlorinators suited to semi-commercial use or pools where large variations in bather-load are experienced such as private swim schools, residential community pools, retirement and aged care facilities, gymnasiums, sports centres and boutique hotels. Employing the same, award-winning AIS technology already operating in large scale theme parks, resorts and hotels worldwide, the Midi is designed for locations where a commercial scale system would be too large and a residential scale system would be inadequate.

Affordable inline disinfection

The second advance from AIS to be launched at Piscine SPLASH! Asia is the new Chrome inline salt water chlorine generator for residential pools.

Chrome is designed for the customer who demands the latest in technology, superior performance and contemporary good looks and at an affordable price. It is perfect for first home buyers or investors. A key feature of Chrome is that it takes the guess work out of keeping pool water clean. An easy-to-read control panel automatically tells when salt levels are lower or higher than desired and chlorine output can then be increased or decreased with the simple turn of a dial.

AIS's chlorinators conveniently produce chlorine onsite and inline without the need for chemical storage and dosing.
